

Combining multiple methods:

Very interesting effects can be achieved through the planned combination of two or more printing techniques.

Frequently, hotfoilstamping and blindembossing can be an interesting match. Here, special toolmaking can bring some astounding, new appearances.

Combination tools, that serve multiple tasks in one single machine run, can be a solution in certain areas. The use of these spezial tools should be well planned since the higher cost of toolmaking cannot always be invested to save overall cost. Only longer runs i.e. in packaging, are suitable for these tools.

Combining Hotfoilstamping and Lithoprinting may bring new input as well as using Engraving on Blindembossing or even Engraving on foiled surfaces, such as family crests.

Structured tools on Hotfoilstamping and Diffractionfoilstamping for safety purposes may result in a much higher lever of security for your printing needs.
